The term shear flow is used in solid mechanics as well as in fluid dynamics. The expression shear flow is used to indicate: . a shear stress over a distance in a thin-walled structure (in solid mechanics);; the flow induced by a force (in a fluid).

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two solid surfaces in contact. Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...
