Forty species of the genus Staphylococcus have been identified thus far (Trülsch et al. 2002, Bannerman 2003, Kwok & Chow 2003, Spargser et al. 2003). S. aureus, a coagulase-positive species which produces a series of other enzymes and toxins, is the best known and has been frequently implicated ...

Abstract: During routine dissection in the Department of Anatomy, Andhra Medical College, we have found the absence of Pectoralis major on one side i.e., left side. The Pectoralis major and minor of right side are well developed. The clavicular fibres of left Pectoralis major are well developed. whereas the sternocostal fibres were absent.

Sequenciamento pelo método de Sanger. O sequenciamento pelo método de terminadores de cadeia (método de Sanger) envolve a síntese de DNA a partir de primers, pequenos moldes de DNA (oligonucleotídeos) complementares a uma região específica de DNA. A partir desta região, uma nova fita de DNA é produzida, pela ação de uma enzima capaz de replicar DNA: a DNA polimerase.

S. aureus es un coco inmóvil, de 0,5 a 1 µm de diámetro, [15] que se divide en tres planos para formar grupos de células irregulares semejantes a racimos de uvas. En extendidos de pus los cocos aparecen solos, en pares, en racimos o en cadenas cortas. Los racimos irregulares son característicos de extendidos tomados de cultivos que se desarrollan en medios sólidos, mientras que en otros ...

Cryptosporidiosis, also known as crypto, is a parasitic disease caused by Cryptosporidium, a genus of protozoan parasites in the phylum Apicomplexa. It affects the distal small intestine and can affect the respiratory tract in both immunocompetent (i.e., individuals with a normal functioning immune system) and immunocompromised (e.g., persons with HIV/AIDS or autoimmune disorders) individuals ...

Borrelia es un género de bacterias del filo espiroqueta, que se caracteriza por su forma helicoidal. Aunque las espiroquetas siempre se han considerado Gram-negativas debido a la presencia de una doble membrana, se han observado grandes diferencias, tanto a nivel estructural como molecular, que las alejan del resto de bacterias Gram-negativas.. Se han identificado 52 especies de Borrelia ...

RESUMEN. En los últimos años el género Enterococcus ha cobrado una gran importancia al nivel internacional por su elevada incidencia en las enfermedades nosocomiales y por la adquisición de resistencia a muchos antimicrobianos. De igual manera, son considerados indicadores de la inocuidad de los alimentos, pues debido a su amplia distribución, pueden encontrarse en estos productos y ...
