

DOWNLOAD MULTILINEAR SUBSPACE LEARNING DIMENSIONALITY REDUCTION OF MULTIDIMENSIONAL DATA

multilinear subspace learning dimensionality pdf

Feature projection transforms the data in the high-dimensional space to a space of fewer dimensions. The data transformation may be linear, as in principal component analysis (PCA), but many nonlinear dimensionality reduction techniques also exist. For multidimensional data, tensor representation can be used in dimensionality reduction through multilinear subspace learning.

Dimensionality reduction - Wikipedia

The curse of dimensionality refers to various phenomena that arise when analyzing and organizing data in high-dimensional spaces (often with hundreds or thousands of dimensions) that do not occur in low-dimensional settings such as the three-dimensional physical space of everyday experience. The expression was coined by Richard E. Bellman when considering problems in dynamic optimization.

A Análise de Componentes Principais (ACP) ou Principal Component Analysis (PCA) é um procedimento matemático que utiliza uma transformação ortogonal (ortogonalização de vetores) para converter um conjunto de observações de variáveis possivelmente correlacionadas num conjunto de valores de variáveis linearmente não correlacionadas chamadas de componentes principais.
