

### **oligosaccharides their synthesis and pdf**

Fructooligosaccharides (FOS) also sometimes called oligofructose or oligofructan, are oligosaccharide fructans, used as an alternative sweetener. FOS exhibits sweetness levels between 30 and 50 percent of sugar in commercially prepared syrups. [unreliable source?] It occurs naturally, and its commercial use emerged in the 1980s in response to consumer demand for healthier and calorie-reduced foods.

The inside cover picture, provided by Cirujano and co-workers, illustrates the results of their work on recycling catalytic amounts of Pd(OAc)<sub>2</sub> in the presence of redox active, stable and reusable metal-organic microporous frameworks (MOF-74), thus achieving the C-H functionalization of pharmaceutically interesting azaheterocycles with alkenes.

Glucansucrases are extracellular enzymes that synthesize a wide variety of  $\alpha$ -glucan polymers and oligosaccharides, such as dextran. These carbohydrates have found numerous applications in food and health industries, and can be used as pure compounds or even be produced in situ by generally regarded as safe (GRAS) lactic acid bacteria in food applications.

An anomer is a type of geometric variation found at certain atoms in carbohydrate molecules. An epimer is a stereoisomer that differs in configuration at any single stereogenic center. An anomer is an epimer at the hemiacetal/acetal carbon in a cyclic saccharide, an atom called the anomeric carbon. The anomeric carbon is the carbon derived from the carbonyl carbon (the ketone or aldehyde ...

Methods for the synthesis of GAuNPs. In general, there are three main methods that can be used to synthesize GAuNPs ().The first one is a direct method, involving the reduction of HAuCl<sub>4</sub> in the presence of carbohydrate derivatives with a thiol end group, which is generally attached to the reducing terminus by a linker .. The second method is a ligand exchange reaction involving the ...
