Inspiring and motivating students from the moment it published, Organic Chemistry has established itself in just one edition as the student's choice of an organic chemistry text. The second edition refines and refocuses Organic Chemistry to produce a text that is even more student-friendly, coherent, and logical in its presentation than before. Like the first, the second edition is built on ...

Organic Chemistry: Jonathan Clayden, Nick Greeves, Stuart

Organic & Biomolecular Chemistry (OBC) publishes original and high impact research and reviews in organic chemistry.. We welcome research that shows new or significantly improved protocols or methodologies in total synthesis, synthetic methodology or physical and theoretical organic chemistry as well as research that shows a significant advance in the organic chemistry or molecular design ...

Organic reactions are chemical reactions involving organic compounds. The basic organic chemistry reaction types are addition reactions, elimination reactions, substitution reactions, pericyclic reactions, rearrangement reactions, photochemical reactions and redox reactions. In organic synthesis, organic reactions are used in the construction of new organic molecules.

A nucleophilic aromatic substitution is a substitution reaction in organic chemistry in which the nucleophile displaces a good leaving group, such as a halide, on an aromatic ring. There are 6 nucleophilic substitution mechanisms encountered with aromatic systems: . the S_NAr (addition-elimination) mechanism; the aromatic S_N1 mechanism encountered with diazonium salts

In stark contrast to the Bieber-obsessed Wii-playing youth of today (and I mean that in the nicest way possible), here is a direct quote from an article written in the 1920s: "More and more the students are learning science out of school. . . . now we have kids talking about electron streams and metric wave lengths as they skate along the streets."

That's what kids used to do for fun? | I Can Has Science?

Asymmetric autocatalysis is a reaction in which a chiral product acts as a chiral catalyst for its own production. The structure of the chiral catalyst and the product is the same.

ProprietÃ chimico-fisiche. Al contrario degli enantiomeri che hanno le stesse proprietÃ chimico-fisiche tranne il potere ottico rotatorio e la reattivitÃ in ambienti chirali, i diastereoisomeri hanno proprietÃ che possono essere totalmente differenti. D'esempio sono la solubilitÃ , fattore sfruttabile per la separazione tramite cristallizzazione frazionata, la densitÃ , il punto di ebollizione.

Polimerizacija je kemijski proces, v katerem se monomer ali mešanica monomerov pretvori v polimer.. Polimerizacije so zaradi različnih reakcijskih mehanizmov razvrščene v več kategorij. Polimeri so lahko linearni (verige) ali prostorsko zamreženi.

Beide Enantiomere des Camphers [(+)-Campher bzw. (-)-Campher] sowie das Racemat (±)-Campher kommen in der Natur vor. Campher findet sich hauptsächlich in den ätherischen Ölen von Lorbeergewächsen, Korbblütlern und Lippenblütlern.. (+)-Campher kommt in der Rinde und im Harz des Kampferbaums (Cinnamomum camphora) vor, eines immergrünen Baums, der hauptsächlich in Asien wächst.
