## **particles and fundamental interactions pdf**

In the conceptual model of fundamental interactions, matter consists of fermions, which carry properties called charges and spin  $\pm \frac{1}{2}$  (intrinsic angular momentum  $\pm \frac{\hbar}{2}$ , where  $\hbar$  is the reduced Planck constant). They attract or repel each other by exchanging bosons. The interaction of any pair of fermions in perturbation theory can then be modelled thus:

In particle physics, an elementary particle or fundamental particle is a subatomic particle with no substructure, thus not composed of other particles. Particles currently thought to be elementary include the fundamental fermions (quarks, leptons, antiquarks, and antileptons), which generally are "matter particles" and "antimatter particles", as well as the fundamental bosons (gauge bosons and ...
