Seismic analysis is a subset of structural analysis and is the calculation of the response of a building (or nonbuilding) structure to earthquakes. It is part of the process of structural design, earthquake engineering or structural assessment and retrofit (see structural engineering) in regions where earthquakes are prevalent.. As seen in the figure, a building has the potential to 'wave' back ...

Seismic loading is one of the basic concepts of earthquake engineering which means application of an earthquake-generated agitation to a structure.It happens at contact surfaces of a structure either with the ground, or with adjacent structures, or with gravity waves from tsunamis.. Seismic loading depends, primarily, on: This seismology article is a stub.
